Partnership For a Living Danube between WWF and The Coca-Cola Company

WWF and The Coca-Cola Company have entered into a seven year partnership to restore vital wetlands and floodplains along the River Danube and its tributaries in Austria, Hungary, Croatia, Serbia, Romania and Bulgaria.

The objective by 2020 is to restore 53 km² of wetland habitats helping to purify and manage 12 million m³ of water (as much as the volume of 4,800 Olympic sized pools) for the benefit of people and nature. The partnership is supported with a \$4.4 million grant from The Coca-Cola Foundation, its biggest single programme in Europe to date.
